RAIN ALARM CIRCUIT

ABSTRACT

Rain water sensor is the main component in the circuit. For this rain sensor, no need to go and buy in the market or online. We can do it ourselves just by taking the piece of Bakelite or mica board and aluminium wire. Bakelite or mica board should be made completely flat and aluminium wire should be pasted on the flat board as shown in the figure below of rain water sensor. Care should be taken that there should be no spaces between the wire and board. When the rain water sensor is completed, it should get connected to the circuit and voltage should be passed through the wires.

1. INTRODUCTION

Water is basic need in every one's life. Saving and proper usage of water is very important.

Here is an easy project which will give the alarm when there is rain, so that we can make some actions and save the rain water. Thus, we can increase the water levels of underground water by using underwater recharge technique. Rain water detector will detect the rain and make an alert; rain water detector is used in the irrigation field, home automation, communication, automobiles etc. Here is the simple and reliable circuit of rain water detector which can be constructed at low cost.
